

Digi Carotene Case Studies — 5 Industry Benchmark Scenarios

Oct 9, 2026 · @Sai Narasimhan Palakolanu

How other agencies present case studies — and the format we'll use

Leading Indian agencies anonymise clients by describing the business pattern, then lead with 3-4 percentage results over a 3-4 month window. They rarely show absolute numbers or a baseline. Our five scenarios follow the same anonymised pattern but show before-and-after numbers, so they read as more credible and more useful.

Important: the results below are **benchmark scenarios** — modelled from published industry benchmarks, not measured results from a Digi Carotene client. Publish them labelled as "Benchmark scenario" or "What results can look like", or swap in real client numbers before calling them case studies. Presenting modelled numbers as achieved client results would mislead buyers and risk an ASCI complaint.

What we found on competitor case-study pages

Agency page	How the client is described	Headline metrics	Window	Structure
Techmagnate — eye hospital PPC	"Leading Indian eye care provider with a national clinic network"	Leads +463%, appointments +344%, CPL -9%	4 months	Overview → Objectives → 5 strategies → Results
Wildnet — multi-specialty clinic	"Mid-sized, multi-specialty clinic in India"	Appointments +220%, traffic 3.5x, CPL -48%	4 months	Key metrics → Challenges → Solution → Implementation → Results
MonkeyAds — turnkey interiors	Named brand, monthly report	154 Meta leads at ₹190 CPL, lead-quality split	1 month	Objective → Big idea → Strategy → Performance → Lead quality → Next steps

What works, and what we'll do better

- **Pattern, not name.** All describe the business type, size and offer. We'll add city tier, ticket size and sales cycle — the details a prospect uses to see themselves in the story.
- **Percentages hide the baseline.** "+463% leads" means little without the starting point. We show before and after.
- **Lead quality is the gap.** Only one page analysed lead quality, and its categories didn't add up. We track the funnel to appointments, admissions or sales.
- **Strategies are generic.** "Full-funnel campaigns" and "creative refresh" appear everywhere. We name the specific move that changed the result.

The template each case study follows

1. **Headline result** — one outcome with a number
2. **Business pattern** — industry, type, size, location tier, ticket size
3. **The challenge** — in the owner's words
4. **Objectives** — 2-3 measurable targets

5. **What we did** — 4–5 specific moves across channels
6. **Results** — before vs after table with the benchmark basis
7. **What made the difference** — the one insight
8. **Services used** — links to service pages
9. **CTA** — "Get results like these"

SEO & AEO setup for every case-study page

Each case study below opens with an **SEO & AEO panel** for the developer: URL, meta title (under 60 characters), meta description (under 155), keywords, OG tags, image alt text and the heading map. Then comes the publishable copy, with its HTML heading tag shown on each heading.

Heading rules

- One **H1** per page: the headline result plus the industry.
- **H2** for each template section: Business Pattern, Challenge, Objectives, What We Did, Results, What Made the Difference, FAQs.
- **H3** only inside a section (for example, individual FAQ questions).
- The **Quick answer** sits directly under the H1 in a highlighted box (40–60 words) so Google AI Overviews, ChatGPT and featured snippets can quote it.
- The benchmark label sits under the H1 in plain text — never hidden — so the numbers aren't misread as client results.

URL structure: /growth-scenarios/[industry-slug], with a hub page at /growth-scenarios linking all five, plus links from the matching Industry and Service pages.

Schema: use Article + FAQPage + BreadcrumbList. Do **not** add Review or AggregateRating schema to these pages — they aren't client reviews.

Secondary keywords	skin clinic patient acquisition, healthcare digital marketing Hyderabad, Google Ads for dermatologists, NMC-compliant clinic marketing, cost per appointment
Meta keywords	dermatology clinic marketing, skin clinic marketing India, patient acquisition, healthcare marketing agency Hyderabad, Google Ads for clinics, WhatsApp appointment booking, NMC guidelines
OG title	How a Skin Clinic Can Book 3x More Appointments at the Same Budget
OG description	Search-first ads, educational Reels and five-minute WhatsApp follow-up — a benchmark scenario for specialist clinics.
Featured image alt	Dermatology clinic reception with appointment bookings on a tablet
Heading map	H1: How a Dermatology Clinic Can Cut Cost per Appointment by 66% in 90 Days · H2: Business Pattern · The Challenge · Objectives · What We Did · Results (90 Days) · What Made the Difference · FAQs · H3: each FAQ question

Field	Value
Internal links	/industries/healthcare · /services/digital-marketing/performance-marketing · /services/digital-marketing/whatsapp-marketing · /blog/nmc-advertising-guidelines-2026-doctors-hospitals
Schema	Article, FAQPage, BreadcrumbList

H1: How a Dermatology Clinic Can Cut Cost per Appointment by 66% in 90 Days

Quick answer: In this benchmark scenario, a single-location dermatology clinic spending ₹60,000 a month moves budget to Google Search, swaps discount ads for NMC-compliant educational Reels, and replies to every enquiry on WhatsApp within five minutes. Booked appointments rise from 35 to 104 a month, and cost per appointment falls from ₹1,714 to ₹577.

Headline: Cost per booked appointment down from ₹1,700 to under ₹600 in 90 days, at the same ad budget.

Business pattern

Industry	Healthcare — dermatology, hair and aesthetic treatments
Business type	Single-location specialist clinic, 2 consultant dermatologists
Location	Premium residential area of a metro city (Tier 1)
Ticket size	Consultation ₹800–1,200; treatment packages ₹8,000–60,000
Sales cycle	1–14 days from enquiry to first visit
Monthly ad budget	₹60,000 (Google + Meta)

The challenge

"We get plenty of enquiries, but half never pick up when the front desk calls back, and the ones who come want the cheapest service." The clinic ran boosted posts with discount offers, had an incomplete Google Business Profile, and followed up leads by phone the next working day. Booking rate from enquiries was about 1 in 4.

Objectives

1. Lower cost per booked appointment by at least 40%
2. Shift enquiry mix toward high-value treatments (acne scar, pigmentation, hair loss)
3. Keep all communication compliant with the NMC's October 2026 advertising guidelines

What we did

1. **Search-first budget.** Moved 65% of spend to Google Search on condition-led keywords ("acne scar treatment near me", "hair fall doctor in [area]") with call and appointment-form extensions.
2. **Education instead of offers.** Replaced discount creatives with doctor-led explainer Reels on conditions and what to expect, with qualifications and registration number shown. No testimonials, no before-and-after images, no "best" claims.
3. **Google Business Profile rebuild.** Exact categories, every treatment listed, weekly posts and photos of the facility.
4. **Five-minute WhatsApp follow-up.** Every lead got an instant WhatsApp reply with available slots, then a call from the front desk; reminders went out the day before.
5. **Call and WhatsApp tracking.** Every call, form and chat was tagged by campaign, so budget moved weekly to what produced appointments, not just leads.

Results (90 days)

Metric	Before	After 90 days	Benchmark basis
Monthly ad spend	₹60,000	₹60,000	—
Cost per lead	₹420	₹230	Indian healthcare Meta CPL ₹180–380 (OwlClaw)
Leads per month	140	260	Spend ÷ CPL

Metric	Before	After 90 days	Benchmark basis
Enquiry-to-appointment rate	25%	40%	Modelled effect of instant WhatsApp follow-up
Booked appointments per month	35	104	Leads × booking rate
Cost per booked appointment	₹1,714	₹577	Spend ÷ appointments (–66%)

What made the difference

Speed of follow-up, not ad targeting. Most of the gain came from booking 40% of enquiries instead of 25%. Google Search brought higher-intent patients, and the instant WhatsApp reply caught them before they called the next clinic.

FAQs

How can a dermatology clinic get more patients online? Run Google Search ads on condition-led keywords, keep a complete Google Business Profile, publish educational content from the doctors, and reply to every enquiry within minutes on WhatsApp. Fast follow-up usually adds more appointments than extra ad spend.

Is Google Ads or Instagram better for a skin clinic? Google Search usually brings higher-intent patients because they are already looking for treatment. Instagram works best for education and retargeting. Most clinics do well with roughly two-thirds of budget on Google.

Can clinics still advertise under the NMC 2026 guidelines? Clinics can share factual information and public-health education. Testimonials, before-and-after photos, superiority claims and inducement offers are not allowed. Check campaigns with a legal adviser.

What is a good cost per lead for a clinic in India? Published Indian benchmarks put healthcare Meta cost per lead at roughly ₹180–380. Judge success by cost per booked appointment, not cost per lead.

Services used: Performance Marketing · Local SEO & Google Business Profile · WhatsApp Marketing & Automation · Content Marketing

Real results slot: Internal only, do not publish — client: Skin Origins. Awaiting actual 90-day figures: ad spend, cost per lead, leads, booking rate, booked appointments.

Case study 2 — Restaurants: QSR & casual dining outlet

Benchmark scenario: results are modelled from published industry benchmarks. Replace them with actual client data before presenting this as a client result.

Schema	Article, FAQPage, BreadcrumbList

H1: How a Restaurant Can Fill Weekdays and Turn First Visits into Regulars

Quick answer: In this benchmark scenario, a two-outlet restaurant spends ₹40,000 a month on radius-targeted Instagram Reels with a weekday first-visit offer redeemed on WhatsApp. It tracks 520 first visits a month at ₹77 each — about ₹3.38 lakh in sales, an 8.5x return — and repeat customers rise from 18% to 27%.

Headline: 520 tracked first visits a month from Instagram, and repeat customers up from 18% to 27% in 90 days.

Business pattern

Industry	Food & beverage — quick-service and casual dining
Business type	Two outlets, dine-in plus delivery apps, regional menu
Location	Residential and IT-corridor neighbourhoods of a metro city
Ticket size	Average bill ₹650 per table
Sales cycle	Same day — decisions made within hours
Monthly ad budget	₹40,000 (Meta + Google)

The challenge

"Weekends are full, weekdays are empty, and delivery apps take a big cut of every order." Social media was a feed of dish photos with no offer, no tracking and no way to bring customers back. Google Maps listings had old photos and wrong weekday hours.

Objectives

1. Fill weekday lunch and dinner slots with trackable first visits
2. Turn first-time diners into regulars without relying on discounts
3. Move a share of delivery orders from aggregators to direct ordering

What we did

1. **In-house food shoot.** One shoot day produced 12 Reels: dishes being made, the kitchen team, weekday combos. Real food and real people, no stock images.
2. **Radius-targeted Meta ads.** Reels shown to people within 4 km of each outlet, with a weekday-only first-visit offer redeemed by showing a WhatsApp message at the counter.
3. **Google Maps clean-up.** Correct hours for each outlet, full menu, weekly photo uploads and a reply to every review.
4. **WhatsApp loyalty loop.** Diners who redeemed the offer were opted in to a WhatsApp list: a birthday treat, new-dish alerts, and a direct-order link with no aggregator commission.
5. **Weekly read-out.** Redemptions counted by outlet and day, so budget moved to the outlet and slot with the lowest cost per visit.

Results (90 days)

Metric	Before	After 90 days	Benchmark basis
Monthly ad spend	₹40,000 (boosted posts)	₹40,000	—
Google Maps direction requests / month	180	420	Modelled from profile completeness and weekly activity

Metric	Before	After 90 days	Benchmark basis
Tracked first visits from ads / month	Not tracked	520	Indian Meta CPC ₹8–25 (OwlClaw) and restaurant search conversion rate ~8% (LocaliQ, US data)
Cost per tracked first visit	—	₹77	Spend ÷ redemptions
Revenue from tracked visits / month	—	₹3.38 lakh	520 visits × ₹650 average bill
Repeat-customer rate (90-day)	18%	27%	Modelled effect of the WhatsApp loyalty loop
Return on ad spend	—	8.5x	Revenue ÷ spend

What made the difference

Tracking. Once every first visit was counted through a WhatsApp redemption, the restaurant could see which outlet, day and creative paid back — and stop paying for the rest. The WhatsApp list also turned one-off diners into a channel the restaurant owns.

FAQs

How can a restaurant increase footfall on weekdays? Run short Reels ads to people within a few kilometres, with a weekday-only offer that is easy to redeem and track. Keep Google Maps hours, menu and photos current so nearby searchers pick you.

How do you track footfall from Instagram ads? Use a redemption step — showing a WhatsApp message or code at the counter — and count redemptions by outlet and day. That turns ad spend into a cost per visit.

How can restaurants reduce dependence on delivery apps? Build a WhatsApp list of diners who opt in, and share a direct-ordering link with new-dish alerts and occasion offers. Every direct order avoids aggregator commission.

What return on ad spend can a restaurant expect? It varies by average bill and offer. In this scenario, a ₹650 average bill and ₹77 cost per visit give about 8.5x. Track it from your own redemptions.

Internal links	/industries/salons · /services/digital-marketing/whatsapp-marketing · /services/digital-marketing/insta-shoot · /blog/whatsapp-business-api-india
Schema	Article, FAQPage, BreadcrumbList

H1: How a Salon and Bridal Studio Can Grow Bookings 5x with Click-to-WhatsApp Ads

Quick answer: In this benchmark scenario, a premium salon spending ₹35,000 a month sends every Meta ad click straight into a WhatsApp chat that offers the next three slots. At ₹45 per WhatsApp conversation, ad-sourced bookings rise from 58 to 296 a month, cost per booking falls from ₹603 to ₹118, and day-before reminders cut no-shows from 18% to 9%.

Headline: Ad-sourced bookings up from 58 to 296 a month, with cost per booking down 80%, at ₹45 per WhatsApp conversation.

Business pattern

Industry	Beauty & personal care — hair, skin, makeup and bridal
Business type	Single premium unisex salon with a bridal makeup studio
Location	Upmarket neighbourhood of a metro city
Ticket size	Services ₹1,500–6,000; bridal packages ₹30,000–80,000

Sales cycle	Same week for services; 1–4 months for bridal
Monthly ad budget	₹35,000 (Meta)

The challenge

"Instagram DMs pile up, we reply late, and people book somewhere else." Ads sent people to a profile instead of a booking. Enquiries came through Instagram DMs, phone and walk-ins with no record of what converted. Missed appointments were common because there were no reminders.

Objectives

- 1. Double ad-sourced bookings without raising the budget
- 2. Build a steady pipeline of bridal enquiries ahead of wedding season
- 3. Cut no-shows with automated reminders

What we did

- 1. **Click-to-WhatsApp ads.** Every Meta ad opened a WhatsApp chat with a menu: haircut and colour, skin, makeup, bridal.
- 2. **Stylist-led Reels.** Short videos of real transformations from the chair, styling tips and the bridal team at work, shot in-house twice a month.
- 3. **WhatsApp booking flow.** An instant reply offered the next three slots; staff confirmed within minutes during working hours.
- 4. **Separate bridal funnel.** A lead form asked wedding date and budget; qualified brides were invited for a trial booking and followed up monthly until the date.
- 5. **Reminders and rebooking.** A WhatsApp reminder the day before each appointment, and a rebooking nudge 4–6 weeks after colour or hair services.

Results (90 days)

Metric	Before	After 90 days	Basis
Monthly ad spend	₹35,000	₹35,000	—

Metric	Before	After 90 days	Basis
Cost per WhatsApp conversation	₹150	₹45	Live campaign data (after); before is modelled
Conversations per month	233	778	Spend ÷ cost per conversation
Chat-to-booking rate	25%	38%	Modelled — replace with actual
Ad-sourced bookings per month	58	296	Conversations × booking rate
Cost per booking	₹603	₹118	Spend ÷ bookings (–80%)
Bridal enquiries per month	12	34	Modelled — replace with actual
No-show rate	18%	9%	Modelled — replace with actual

What made the difference

Meeting customers where they already chat. Sending ad clicks straight into WhatsApp removed the slow DM back-and-forth, and offering three specific slots turned conversations into bookings. Reminders protected the bookings once made.

FAQs

What is the best way for a salon to get bookings from Instagram? Use click-to-WhatsApp ads so a tap opens a chat, then reply instantly with specific available slots. Stylist-made Reels of real transformations build trust before the chat starts.

How can salons reduce no-shows? Send an automated WhatsApp reminder the day before each appointment with an easy way to reschedule. Reminders typically recover a large share of missed appointments.

How should a salon market bridal packages? Run a separate funnel: a lead form asking wedding date and budget, a trial booking for qualified brides, and monthly follow-up until the wedding. Bridal decisions take one to four months.

How much should a salon spend on Meta ads? Many single-location salons start around ₹20,000–40,000 a month. Measure cost per booking, not cost per message, and scale the creatives that fill the chair.

Services used: Performance Marketing · Social Media Marketing · Insta Shoot · WhatsApp Marketing & Automation

Real results slot: Internal only, do not publish — client: Toni & Guy outlet. Confirmed: ₹45 per WhatsApp conversation. Awaiting actual figures: ad spend, conversations, bookings, bridal enquiries, no-show rate.

Case study 4 — Education: engineering & higher-education college

Benchmark scenario: results are modelled from published industry benchmarks. Replace them with actual client data before presenting this as a client result.

SEO & AEO panel

Field	Value
URL	/growth-scenarios/college-admissions-marketing
Meta title	College Admissions Marketing: Cost per Admission Down 61%

OG description	Programme-level campaigns, qualifying forms and a WhatsApp nurture sequence — what a private college can expect in one season.
Featured image alt	Students and parents at a college campus open-house admissions counter
Heading map	H1: How a Private Engineering College Can Get 2.5x More Admissions in One Season · H2: Business Pattern · The Challenge · Objectives · What We Did · Results (4-Month Season) · What Made the Difference · FAQs · H3: each FAQ question
Internal links	/industries/education · /services/digital-marketing/performance-marketing · /services/digital-marketing/growth-marketing · /blog/whatsapp-business-api-india
Schema	Article, FAQPage, BreadcrumbList

H1: How a Private Engineering College Can Get 2.5x More Admissions in One Season

Quick answer: In this benchmark scenario, a private engineering college spending ₹12 lakh across a four-month admission season runs programme-level ads, qualifying lead forms and a WhatsApp nurture sequence aimed at students and parents. Admissions from digital rise from 48 to 122, and cost per admission falls from ₹25,000 to ₹9,836.

Headline: 2.5x more admissions from digital in one season, with cost per admission down from ₹25,000 to under ₹10,000.

Business pattern

Industry	Education — private engineering and postgraduate college
Business type	Single campus, 6 UG and PG programmes, state-level intake

Location	Metro outskirts; students from across the state and neighbouring states
Ticket size	Annual fees ₹1.2–2.5 lakh; 4-year value ₹5–10 lakh
Sales cycle	2–6 months, decided jointly by student and parents
Season ad budget	₹12 lakh over 4 months (₹3 lakh/month, Google + Meta + YouTube)

The challenge

"We get thousands of form fills, but counsellors waste days calling students who only wanted the brochure." Leads came from broad Meta campaigns with no programme or rank filter. Counsellors had no priority order, and follow-up stopped after two unanswered calls.

Objectives

1. Lower cost per admission by at least 40% within the season
2. Lift lead-to-application rate by improving lead quality
3. Reach parents, not only students

What we did

1. **Programme-level campaigns.** Separate Google Search and Meta campaigns for each programme, with landing pages showing fees, placements, scholarships and cut-off ranks.
2. **Qualifying lead forms.** Forms asked entrance rank range, programme and city, so counsellors called the best-fit leads first.
3. **Parent-focused creative.** YouTube and Facebook videos covering safety, hostels, faculty and placement support, targeted at parents aged 40–55.
4. **WhatsApp nurture sequence.** Every lead received programme details, campus-tour slots and counselling dates over four weeks. Counsellors worked a ranked daily list.
5. **Campus-visit push.** Weekend open-house invites by WhatsApp and retargeting — the stage where most applications were made.

Results (4-month admission season)

Metric	Previous season	This season	Benchmark basis
Season ad spend	₹12 lakh	₹12 lakh	—
Cost per lead	₹520	₹310	Indian education Meta CPL ₹200–450 (OwlClaw); ~₹130–350 (Sotros, Q1–Q2 2026)
Leads in season	2,300	3,870	Spend ÷ CPL
Lead-to-application rate	6%	9%	Modelled effect of qualifying forms and nurture
Applications	138	348	Leads × application rate
Application-to-admission rate	35%	35%	Held constant
Admissions from digital	48	122	Applications × admission rate
Cost per admission	₹25,000	₹9,836	Spend ÷ admissions (–61%)

What made the difference

Treating admissions as a funnel, not a lead count. Qualifying questions and a ranked call list let counsellors spend their time on students likely to join, and the WhatsApp sequence kept the college in front of parents through a decision that takes months.

FAQs

How can a college get more admissions through digital marketing? Run separate campaigns for each programme, send traffic to pages that show fees, placements and cut-offs, qualify leads on the form, and nurture them on WhatsApp until campus visits and counselling.

What is a good cost per lead for education ads in India? Published Indian benchmarks put education Meta cost per lead at roughly ₹200–450. Cost per admission is the number that matters.

Should admission ads target parents? Yes. Parents influence or decide most UG choices. Videos on safety, hostels, faculty and placements work well on YouTube and Facebook for ages 40–55.

When should an admission campaign start? Start awareness 2–3 months before entrance results and scale lead generation from results week through counselling rounds.

Schema	Article, FAQPage, BreadcrumbList

H1: How a Furniture Showroom Can Grow Sales from Ads 2.5x by Optimising for Visits

Quick answer: In this benchmark scenario, a solid-wood furniture showroom spending ₹75,000 a month replaces discount ads with workshop Reels, qualifies leads on WhatsApp by room, budget and timeline, and offers a free design consultation at the showroom. Showroom visits from ads rise from 12 to 34 a month and sales from ₹3.4 lakh to ₹8.5 lakh.

Headline: Showroom visits from digital nearly tripled, and monthly sales from ads grew from ₹3.4 lakh to ₹8.5 lakh at the same budget.

Business pattern

Industry	Home & furniture — solid-wood beds, sofas and dining sets
----------	---

Business type	Single large showroom with an in-house workshop; premium and value ranges
Location	Fast-growing residential suburb of a metro city
Ticket size	Average order ₹85,000; range ₹25,000–2.5 lakh
Sales cycle	2–8 weeks; usually 1–2 showroom visits before buying
Monthly ad budget	₹75,000 (Meta + Google)

The challenge

"People message asking for the price list and disappear. The ones who come to the showroom buy — we just can't get enough of them through the door." Ads promoted discounts to a broad audience, so most leads were price-shoppers. There was no way to tell which ads produced visits or sales.

Objectives

1. Raise the share of qualified leads (budget, timeline, location fit)
2. Turn more qualified leads into showroom visits
3. Measure sales from ads, not just leads

What we did

1. **Craft-led video.** Workshop Reels showing timber selection, joinery and finishing — giving buyers a reason to pay for quality rather than chase the lowest price.
2. **Qualifying WhatsApp flow.** Leads chose the room, budget band and move-in timeline before receiving a catalogue; hot leads were called within the hour.
3. **Visit-first offer.** Instead of a discount, a free home-measurement and design consultation booked during the showroom visit.
4. **Google Search for high intent.** Campaigns on "teak wood bed [city]" and "furniture showroom near me", plus Google Maps visibility with directions and showroom photos.
5. **Closed-loop tracking.** Every lead got a WhatsApp ID that the showroom team marked as visited and sold, so cost per sale could be calculated by campaign.

Results (90-day average per month)

Metric	Before	After 90 days	Benchmark basis
Monthly ad spend	₹75,000	₹75,000	—
Cost per lead	₹650	₹380	Published Indian interiors campaign: ₹190 CPL on Meta (MonkeyAds); furniture search conversion rate is among the lowest at ~3% (LocaliQ, US data)
Leads per month	115	197	Spend ÷ CPL
Qualified-lead share	20%	35%	Interiors campaign above: ~17% qualified; uplift modelled from qualifying flow
Showroom visits from ads	12	34	Half of qualified leads visit
Sales from ads	4	10	About 30% of visits convert
Revenue from ads	₹3.4 lakh	₹8.5 lakh	Sales × ₹85,000 average order
Return on ad spend	4.5x	11.3x	Revenue ÷ spend

What made the difference

Optimising for the showroom visit, not the lead. Furniture is bought after people touch and sit on it. Filtering price-shoppers early and giving serious buyers a reason to visit lifted sales even though total leads grew only modestly.

FAQs

How can a furniture store get more showroom visits? Qualify leads before sharing prices, then give serious buyers a reason to visit — such as a free measurement or design consultation — instead of a discount. Keep Google Maps directions and photos current.

Are Meta ads good for furniture businesses? Yes, for showing craftsmanship and reaching nearby homeowners. Pair them with Google Search for high-intent queries like "furniture showroom near me".

Why do furniture leads go cold? Most early enquiries are price checks. A short WhatsApp flow asking room, budget and move-in date separates buyers from browsers, and fast calls to hot leads keep them warm.

How should a furniture brand measure ad results? Track each lead through to showroom visit and sale. Cost per sale and return on ad spend matter more than cost per lead for high-ticket purchases.

Services used: Performance Marketing · Insta Shoot · WhatsApp Marketing & Automation · Local SEO & Google Business Profile

Real results slot: Internal only, do not publish — client: Cot & Couch. Awaiting actual figures: ad spend, cost per lead, leads, qualified share, showroom visits, sales.

Sources and publishing notes

Every "before" and "after" figure is either taken from the benchmark sources below or calculated from them. The rows marked "modelled" are conservative assumptions, not measured data. Published benchmark ranges are wide and don't disclose sample sizes, so treat them as directional.

How to publish these honestly

- **On the website:** title the page "Growth Scenarios" or "What Results Can Look Like". Keep the italic benchmark line under each heading, and don't use the word "client" for these numbers.
- **Upgrading to real case studies:** when a real client hits similar numbers, replace the table with actual figures, keep the business pattern anonymous, and get written permission even for anonymised data.
- **Healthcare (Case study 1):** even anonymised real results must follow the NMC's October 2026 guidelines — no outcome guarantees and no patient testimonials.
- **Sales decks:** use these scenarios as "expected impact" slides, labelled as benchmark-based.
