

Digi Carotene — Media Assets Checklist

One-page brief for launch media · Homepage + key inner pages · Deliver compressed files only

Compress everything before handoff — web-optimised images & videos keep the site fast and use less memory/bandwidth. Prefer WebP/JPG for photos, PNG for logos, short MP4 for reels.

#	Section (heading)	What to give
1	Hero (home mosaic)	9 images — same crop/feel, campaign/work photos (compressed WebP or JPG)
2	Our Clients (logo marquee)	At least 12 client logos — same size PNG, transparent, ~360×100, compressed
3	Campaign visuals... (Visual Showcase)	6 images — compressed WebP/JPG
4	Creative Reels	At least 5 videos + 5 poster images (one poster per reel) — short, compressed MP4
5	Growth Our Clients Can Count (Results)	3 case cards — client name, 1 real metric, short story (optional: 3 compressed images)
6	Testimonials / reviews	At least 3–5 Google reviews — name, role, city, quote + link to Google Business Profile
7	Industry pages — “Clients We Work With in This Sector”	2–3 real logos per industry × 7 industries ≈ 14–21 logos (same PNG format; can overlap with marquee)
8	Team / Founder	1 founder photo + team photos (as many named people as needed) — compressed
9	About / Clients page	Same real client logos as marquee (no fake brands)

Compression & delivery rules

- **Photos:** WebP or JPG, target under ~200–400 KB each where possible; avoid huge uncropped camera files.
- **Logos:** PNG transparent, shared canvas ~360×100, keep file size small (ideally under ~50–80 KB each).
- **Videos:** Short MP4 (H.264), compressed for web; prefer under ~3–8 MB each; no raw 4K dumps.
- **Posters:** One still image per reel, compressed WebP/JPG.
- Only permissioned client logos and real metrics — do not invent proof.
